 Tandil, Argentina.

### ABOUT ME

My name is Valentino, a student of the Technicature in Application Development at UNICEN, Tandil. I am looking for my first professional experiences to apply and expand the knowledge I have acquired during my studies. I am motivated and ready to face new challenges in software development.

### EDUCATION

#### National University

Technicature in Application Development

#### National Technological University (UTN)

Advanced React JS Training

#### Codigo Facilito

- Advanced Training in Node & Express
- Advanced Training in Next.js
- TypeScript Course

### SKILLS

- Programming Languages
- Databases
- Leadership
- App Architecture
- UX/UI
- Teamwork

### LANGUAGES

- Spanish: Native
- English: Intermediate-Advanced (B2)

### ACADEMIC PROJECTS AND KNOWLEDGE

#### Application Development Technicature

##### JAVA

During my studies, I acquired solid knowledge in algorithms, object-oriented programming with Java, and software architecture. Additionally, I developed soft skills and teamwork capabilities, which are essential for collaborating effectively in projects. I also gained experience with Git, an essential tool for version control and collaborative development. I have learned Object-Oriented Programming (OOP), threads, multithreading, design patterns, and basic Spring framework.

##### React JS & Next Js Framework

I gained experience in React using hooks, state management, and component-based architecture to build dynamic, scalable applications. With Next.js, I worked on dynamic routing, server-side rendering, API routes, and performance optimization through lazy loading and code splitting, integrating authentication and security features across both frameworks.

##### Node JS & Nest JS Framework

I learned how to develop with Node.js and the Nest framework, creating APIs and using tools like webhooks and websockets. I also delved into security, authentication, and building robust backend architectures.

##### Bases de datos SQL Y No SQL

I have solid knowledge of SQL databases, including creating views, triggers, query optimization, and designing advanced structures. I am also proficient in NoSQL databases like MongoDB. My skills include designing scalable database schemas and optimizing the performance of complex queries.

##### Typescript

I developed strong skills in TypeScript, focusing on type safety, interfaces, and generics to write robust, scalable code.
